

STROKE SYSTEMS OF CARE IN KENTUCKY

OCTOBER 18, 2023

Kari Moore, MSN, AGACNP-BC, ANVP-BC, FAHA
Director, Community and Scholarly Engagement
Co-Chair, SEQIP
Department of Neurology, School of Medicine
University of Louisville

OBJECTIVES

- The audience will be able to discuss recommendations for improving stroke systems of care nationally
- The audience will be able to discuss current and future initiatives focused on improving stroke systems of care in Kentucky
- The audience will be able to discuss the current model/framework utilized to improve stroke systems of care in Kentucky

STROKE SYSTEMS OF CARE BACKGROUND

IOM fragmentation of the delivery of healthcare services frequently results in suboptimal treatment, safety concerns, and inefficient use of healthcare resources. Recommend establishment of coordinated systems of care that integrate preventive and treatment services and promote patient access to evidence based care

Recommendations for the Establishment of Stroke Systems of Care

Recommendations From the American Stroke Association's Task Force on the Development of Stroke Systems

Task Force Members

Lee H. Schwamm, MD; Arthur Pancioli, MD; Joe E. Acker III, EMT-P, MPH, MS;
Larry B. Goldstein, MD; Richard D. Zorowitz, MD; Timothy J. Shephard, PhD(c), CNRN, CNS;
Peter Moyer, MD, MPH; Mark Gorman, MD; S. Claiborne Johnston, MPH, MD, PhD;
Pamela W. Duncan, PhD; Phil Gorelick, MD; Jeffery Frank, MD; Steven K. Stranne, MD, JD;
Renee Smith, MPA; William Federspiel, BA; Katie B. Horton, RN, JD;
Ellen Magnis, MBA; Robert J. Adams, MD

Task Force Recommendations:

- Effective interaction among stakeholders
- Organized and standardized approach to care in each component of the system
- Establish performance measures in process and outcomes to evaluate effectiveness
- Provide patients and providers with tools necessary to promote effective stroke prevention, treatment, and rehabilitation
- Ensure decisions about protocols and patient care are best for patients above geopolitical boundaries and corporate affiliations
- Identify and address obstacles to implementation
- Customized for each state, region, or locality to meet the needs of the population served

STROKE SYSTEMS OF CARE BACKGROUND

Interactions Within Stroke Systems of Care

A Policy Statement From the American Heart Association/American Stroke Association

Randall Higashida, MD, FAHA, Chair*; Mark J. Alberts, MD, FAHA, Co-Chair*;
David N. Alexander, MD; Todd J. Crocco, MD; Bart M. Demaerschalk, MD;
Colin P. Derdeyn, MD, FAHA; Larry B. Goldstein, MD, FAHA;
Edward C. Jauch, MD, MS, FAHA; Stephan A. Mayer, MD, FAHA; Neil M. Meltzer, MPH;
Eric D. Peterson, MD, FAHA; Robert H. Rosenwasser, MD, FAHA; Jeffrey L. Saver, MD, FAHA;
Lee Schwamm, MD, FAHA; Debbie Summers, RN, MSN, ACNS-BC, FAHA;
Lawrence Wechsler, MD, FAHA; Joseph P. Wood, MD, JD;
on behalf of the American Heart Association Advocacy Coordinating Committee

Additional Focus:

- Proliferation of various levels of stroke centers (CSC)
- Expanded use of telemedicine
- Advanced medical, endovascular, and surgical interventions
- Comprehensive rehabilitation strategies and programs

Recommendations:

EMS: Use of stroke screening scale; prenotification; develop triage protocols

Policy: Support for stroke center certification and public reporting of performance measures and outcomes; implement reimbursement schedules that meet the demanding care and expertise required to care for stroke patients

Hospitals: Adopt care delivery protocols that adhere to current guidelines; Transfer protocols and criteria; Interhospital handoff; support for telestroke services to provide 24/7 coverage and care when needed; Collaborate with EMS; Establish quality performance metrics

Rehab: Ensure all patients have access to post stroke care regardless of financial status or background

STROKE SYSTEMS OF CARE BACKGROUND

Recommendations for the Establishment of Stroke Systems of Care: A 2019 Update

A Policy Statement From the American Stroke Association

Opeolu Adeoye, MD, MS, FAHA, Chair; Karin V. Nyström, RN, MSN, FAHA;
Dileep R. Yavagal, MD; Jean Luciano, CRNP; Raul G. Nogueira, MD;
Richard D. Zorowitz, MD; Alexander A. Khalessi, MD, MS, FAHA;
Cheryl Bushnell, MD, MHS, FAHA; William G. Barsan, MD; Peter Panagos, MD;
Mark J. Alberts, MD, FAHA; A. Colby Tiner, MA; Lee H. Schwamm, MD, FAHA;
Edward C. Jauch, MD, MS, FAHA

Update to guide policy makers and public health officials:

- Proliferation of various levels of stroke centers (ASR, TSC)
- Neurocritical Care
- Improvements in Endovascular Therapy
- Mobile stroke units
- Changes in organization of healthcare policy

New Recommendations:

- Support local and regional education initiatives to increase stroke awareness (signs and symptoms, risk factors, primary and secondary prevention, and recovery)
- Monitor the effectiveness of community education
- Methods to systematically identify and treat risk factors for all patients at risk for stroke should be developed
- Utilization of stroke severity scale when stroke screen scale is positive to assist destination triage
- Standardized approaches to prehospital stroke assessment for 911 call centers and dispatchers
- Extra transportation times should be limited to no more than 15 minutes in patients with suspected LVO based on severity screening scale
- All levels of stroke centers should work within in an integrated fashion, providing and sharing best practices
- All stroke centers should develop a plan for the definitive identification and treatment of stroke patients with LVO
- Centers performing thrombectomy should rigorously track patient flow and outcomes
- Establish support systems to ensure all patients discharged from hospitals and other facilities to home have appropriate follow up with specialized stroke services
- Standardize post acute care
 - Screen for post acute complications
 - Provide individualized care plans
 - Referrals to community services
 - Reinforce secondary stroke prevention and self management of stroke risk factors (trained nurses, APRNs, MSSW, CHWs should play a pivotal role)
- Federal and other government institutions should enact policies that standardize the organization of stroke care throughout the continuum

STATE OF STROKE IN KENTUCKY

- 41% of Kentuckians have hypertension, the #1 risk factor for stroke
- 5% of adult Kentuckians report they have experienced a stroke at some time in their life
- Kentucky ranks 14th mortality rate in the US
- 6th highest cause of death in Kentucky
- The total charges for inpatient hospital stay for stroke and TIA exceeded \$894 million in 2021 and \$1.3 Billion in 2022

1.CDC NCHS. Stats of the States. Stroke Mortality by State, April 2023

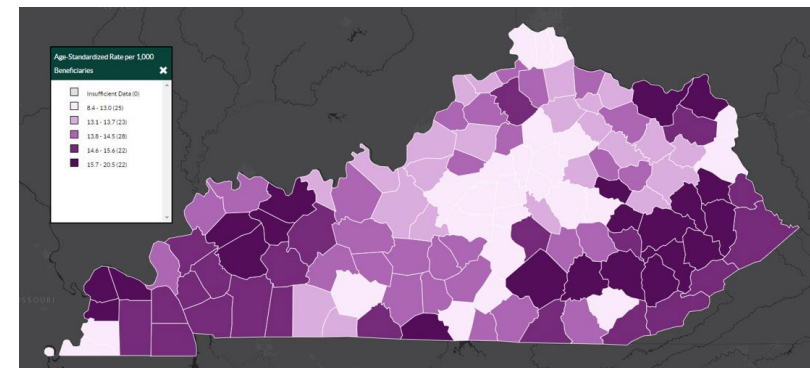

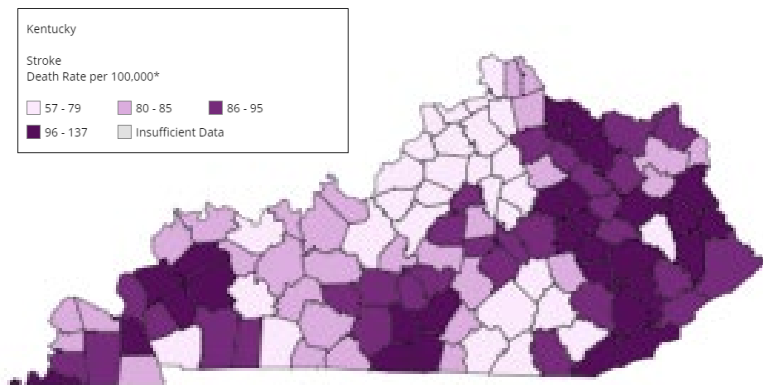

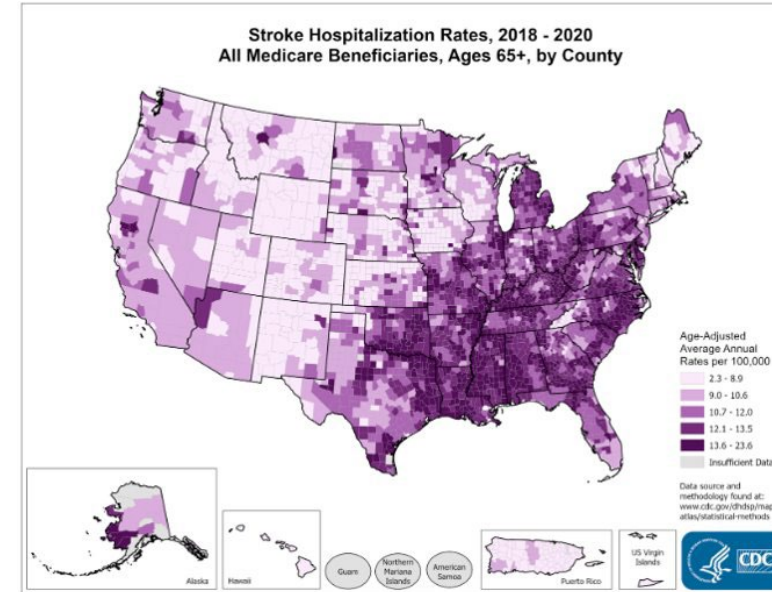

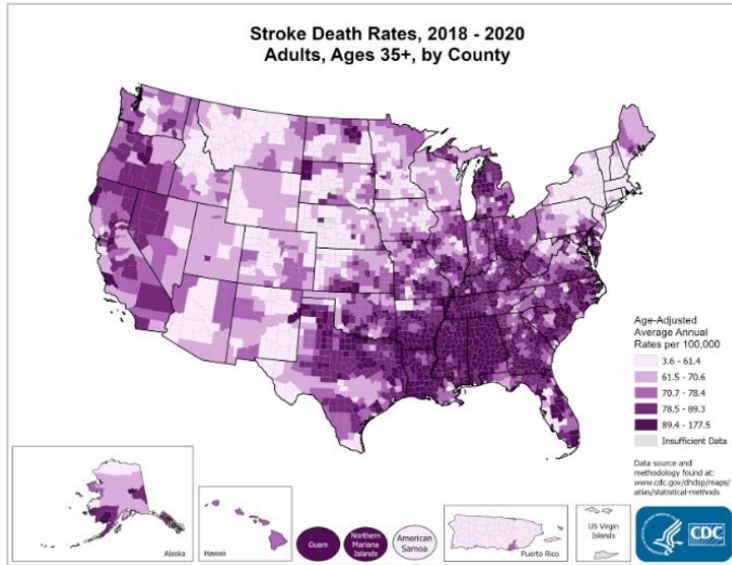

2.CDC Wonder, April 2023

3.Kentucky Behavioral Risk Factor Surveillance. Kentucky Cabinet for Health and Family Services. 2021 Crude Prevalence.

4.Kentucky Hospital Inpatient Claims: 2021;2022; Kentucky Cabinet for Health and Family Services, Office of Health Policy

The documents below have been approved by the Standardized Messaging committee for use in signs and symptoms of stroke education and awareness. Please click "download" to print and distribute these resources as necessary.

Call 911 IMMEDIATELY!

Balance:
Trouble walking?
Loss of balance or coordination, dizziness.

Eyes:
Trouble seeing?
Change in vision in one or both eyes.

Face:
Smile uneven?
Face looks uneven, droopy or is numb.

Arms:
Raise both arms. Does one drop?
Weakness or numbness in one arm or leg.

Speech:
Trouble speaking or confused?

Face Drooping
Does one side of the face drop or is it numb? Ask the person to smile.

Arm Weakness
Is one arm weak or numb? Ask the person to raise both arms. Does one arm drift downward?

Speech Difficulty
Is speech slurred, are they unable to speak, or are they hard to understand? Ask the person to repeat a simple sentence, like "The sky is blue." Is the sentence repeated correctly?

Time to call 9-1-1
If the person shows **any** of these symptoms, **call**

Beyond F.A.S.T. -- Other Symptoms you should know

- Sudden numbness or weakness of the leg
- Sudden confusion or trouble understanding
- Sudden trouble seeing in one or both eyes
- Sudden trouble walking, dizziness, loss of balance or coordination
- Sudden severe headache with no known cause

Cardiovascular, Assessment, Risk Reduction and Education (CARE) Collaborative

IS IT A STROKE? CHECK THESE SIGNS FAST

FACE Does the **FACE** look uneven? Ask them to smile.

ARM Does one **ARM** drift down? Ask them to raise both arms.

SPEECH Does their **SPEECH** sound strange? Ask them to repeat a phrase.

TIME EVERY second brain cells die. Call 9-1-1 at ANY sign of a stroke!

STROKE IS AN EMERGENCY!
Call 911 immediately if you see or have any of these symptoms. Every minute counts!

MEDICAL HISTORY
Please check all that apply:
☐ Asthma ☐ Peripheral Vascular Disease (poor circulation)
☐ Cancer ☐ Kidney Disease
☐ Heart Disease ☐ Tobacco Use
☐ High Cholesterol ☐ KY Tobacco Quit Line: 1 (800) QUIT NOW 1 (800) 784-8669
☐ High Blood Pressure ☐ Other

Recent Surgeries/Hospitalizations (include month/year and location)

SIGNS AND SYMPTOMS OF A HEART ATTACK

- Chest discomfort lasting more than a few minutes; pressure, squeezing, fullness or pain.
- Discomfort in one or both arms, the back, neck, jaw or stomach.
- Shortness of breath with or without chest discomfort.
- Cold sweat, nausea or light headedness.
- Women most often experience chest pain or discomfort, but may be more likely than men to experience shortness of breath, nausea/vomiting, and back or jaw pain.

If you or someone you are with has any of these symptoms, call 911 immediately. **HEART ATTACK IS AN EMERGENCY!** Every minute counts!

Pharmacy Name, Location and Phone Number
Emergency Contact Name and Phone Number
Health Care Provider and Office Phone Number
Allergies (Food and Medication)

Please list all medications you take, including over-the-counter medications (for example antacids, vitamins, pain relievers). Review and update this list at every visit to your primary care provider, specialist, emergency room and/or hospital.

NAME OF MEDICATION (Brand or generic name)	DOSE (mg, units, puffs, drops)	HOW MANY (Number of tablets, puffs, drops)	HOW OFTEN/PURPOSE (Number of times taken per day-evening? at bedtime? morning?) (When do you take this medication?)	KNOW YOUR NUMBERS			
				Healthy Goal	Actual	Actual

WHAT IS SEQIP?

- Statewide quality improvement initiative developed by the Heart Disease and Stroke Prevention Program (HDSP), HDSP Task Force, and AHA/ASA
- Established 2009
- Designed to encourage collaboration among hospitals and stakeholders in KY
- Mission to advance acute stroke care and reduce stroke disparities in Kentucky
- Initially 16 hospitals in 2009, currently 50 hospitals with 49 contributing data to GWTG-S
- First Kentucky Stroke Registry
- All certified stroke centers are represented
- Legislative report submitted annually since 2012 – KRS 211.575
 - Governor and Legislative Research Commission

HDSP STATE PLAN

Kentucky Heart Disease and Stroke Prevention Task Force Strategic Map and Plan: 2020-2023

Goal B: Utilization of Evidence-Based Integrated Cerebrovascular and Cardiovascular Health Delivery Systems	
Objective B: Maintain statewide cerebrovascular and cardiovascular systems of care.	
Objective B1: Maintain and continue to improve statewide cerebrovascular systems of care.	
Strategy 1	Action Items
Continue to identify opportunities for improvement within current cerebrovascular systems of care.	Continue to identify and map certified stroke centers by certification levels as defined by KRS 216B.0425, and disseminate to Kentucky Board of Emergency Medical Services (KBEMS). <ul style="list-style-type: none"> - Acute stroke ready hospitals - Primary stroke centers - Thrombectomy-capable stroke centers - Comprehensive stroke centers
	Continue collaboration with Kentucky Hospital Association's (KHA) Rural Hospital Flexibility program.
	Continue to partner with Kentucky hospitals to increase acute stroke treatments (intravenous tissue plasminogen activator and mechanical thrombectomy).
	Continue to identify emergency medical services (EMS) agencies which have a field transport protocol for stroke and provide expert consultation/evaluation to ensure said protocols are up to date with the most current science.
	Partner with KBEMS to determine stroke specific data points available for capture and reporting.
	Implement pilot project for EMS feedback, training, and education to improve local systems of care.
	Continue collaboration with the KBEMS subcommittee, Cardiac and Stroke Care.
	Disseminate and provide access to current evidence-based dispatch protocols for stroke.
	Partner with KBEMS for continued development of inter-facility transport protocols for all stroke subtypes.
	Assess inter-facility emergent transfer needs to meet recommended time goals.
	Disseminate KBEMS inter-facility transport protocols at local and regional levels.
	Establish a pediatric stroke subcommittee.

Kentucky Heart Disease and Stroke Prevention Task Force Strategic Map and Plan: 2020-2023

Goal B: Utilization of Evidence-Based Integrated Cerebrovascular and Cardiovascular Health Delivery Systems	
Objective B: Maintain statewide cerebrovascular and cardiovascular systems of care.	
Objective B1: Maintain and continue to improve statewide cerebrovascular systems of care.	
Strategy 2	Action Items
Continue Stroke Encounter Quality Improvement Project (SEQIP) through FY 2023.	Assess current SEQIP members for continued participation by March 2020.
	Recruit at least one hospital pursuing thrombectomy-capable certification by March 2022.
	Continue to utilize registry to develop and implement action plans around quality metrics and education.
	Continue to develop and disseminate Stroke Registry Data Summary in accordance with KRS 211.575, which goes to the governor and the Legislative Research Commission and includes recommendations for improving stroke systems of care.
Strategy 3	Action Items
Continue to engage and support hospitals maintaining and achieving stroke center certification.	Disseminate the Kentucky strategic map and plan to target hospitals by December 2020.
	Continue to provide support for stroke program development to target hospitals.
	Update and disseminate stroke resources through Kentucky Heart Disease and Stroke Prevention (KHDSPP) Task Force website (KHDSPPtaskforce.com) annually.
Strategy 4	Action Items
Continue collaboration among healthcare systems and public health to disseminate standardized messaging.	Implement action items from Goal A - Objective A1: Strategy 1: Promote and reinforce healthy behaviors and standardized messaging.

LEGISLATION – STROKE CENTER DESIGNATION

216B.0425 Certification designations for stroke care for acute care hospitals

(1) Except as otherwise provided, for purposes of this section:

(a) "Acute care hospital" means a licensed facility providing inpatient and outpatient medical or surgical services to an individual that seeks care and treatment, regardless of the individual's ability to pay for services, on an immediate and emergent basis through an established emergency department and a continuous treatment basis on its premises for more than twenty-four (24) hours; and

(b) "Acute stroke ready hospital certification," "primary stroke center certification," "thrombectomy-capable stroke center certification," and "comprehensive stroke center certification" mean certification for acute care hospitals issued by the Joint Commission, the American Heart Association, or another cabinet-approved nationally recognized organization that provides disease-specific certification for stroke care, that:

1. Complies with census-based national standards and safety goals;
2. Effectively uses evidence-based clinical practice guidelines to manage and optimize care; and
3. Uses an organized approach to measure performance.

(2) The secretary of the Cabinet for Health and Family Services shall designate as a certified stroke center any acute care hospital which has received an acute stroke ready hospital certification, a primary stroke center certification, a thrombectomy capable stroke center, or a comprehensive stroke center certification.

(3) The secretary shall suspend or revoke an acute care hospital's designation as an acute stroke ready hospital, a primary stroke center, a thrombectomy-capable stroke center, or a comprehensive stroke center if certification is withdrawn by the Joint Commission, the American Heart Association, or another cabinet-approved certifying organization.

(4) (a) The cabinet shall maintain a list of certified acute stroke ready hospitals, primary stroke centers, thrombectomy-capable stroke centers, and comprehensive stroke centers and post the list on its Web site. The cabinet shall provide the list and periodic updates to the Kentucky Board of Emergency Medical Services.

(b) The Kentucky Board of Emergency Medical Services shall share the list with each local emergency medical services provider at least annually, and as new centers and hospitals are designated and certified.

Effective: July 14, 2022 History:

History: Amended 2022 Ky. Acts ch. 33, sec. 1, effective July 14, 2022. -- Amended 2015 Ky. Acts ch. 9, sec. 1, effective June 24, 2015. -- Created 2010 Ky. Acts ch. 67, sec. 1, effective July 15, 2010.

LEGISLATION – REGISTRY/REPORT TO THE GOVERNOR AND LRC

211.575 Statewide system for stroke response and treatment

- Department of Public Health shall establish and implement a plan for achieving continuous QI in the quality of care provided under a statewide system for stroke response and treatment.
 - Includes database aligned with stroke consensus metrics
 - Utilization of GWTG or another nationally recognized program
 - Require certified stroke centers to report to the database each stroke case
- Coordination among voluntary organizations to avoid redundancy, sharing of information among HCPs
- Application of evidence-based treatment guidelines
- Statewide process for PI and data oversight
- Provide report to Governor and LRC annually

Effective: July 12, 2012

History: Created 2012 KY. Acts ch. 106, sec. 1, effective July 12, 2012

SEQIP Annual Governor's Report

- Burden of CV disease in KY
- SEQIP overview
- Executive summary with demographics to include types of stroke and performance measure results
- Full graphical data to include performance measure results for most current available data
- Recommendations to improve cerebrovascular systems of care

Kentucky Stroke Encounter Quality
Improvement Project (SEQIP)

Kentucky Heart Disease and Stroke Prevention Task Force

SEQIP Registry 2021-2022 Data Summary

2023 Annual Report

EMERGENCY MEDICAL SERVICES

Figure 22: Patients’ arrival mode to SEQIP hospitals 2009-2022

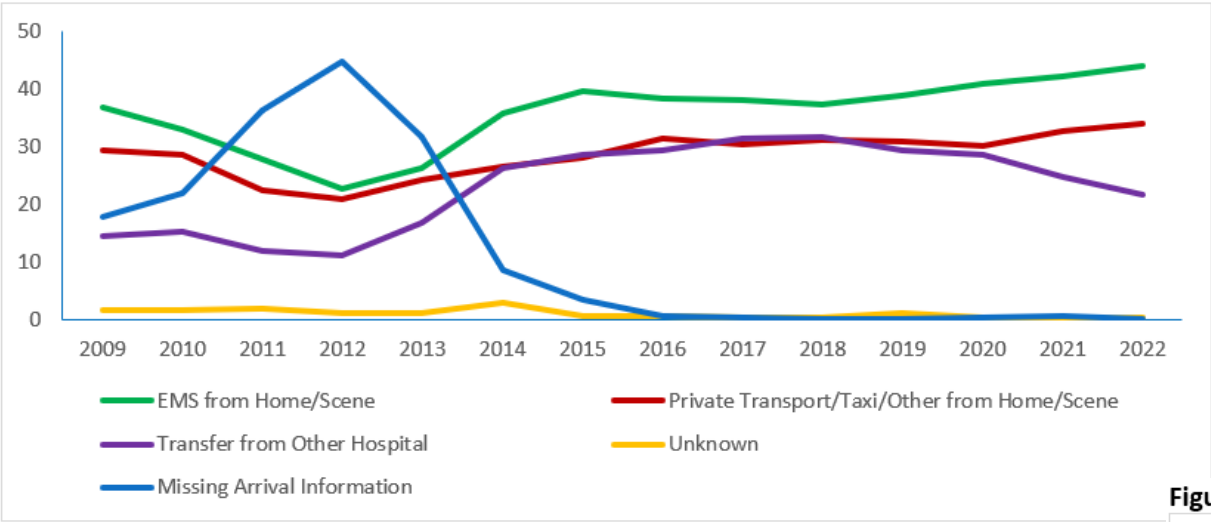

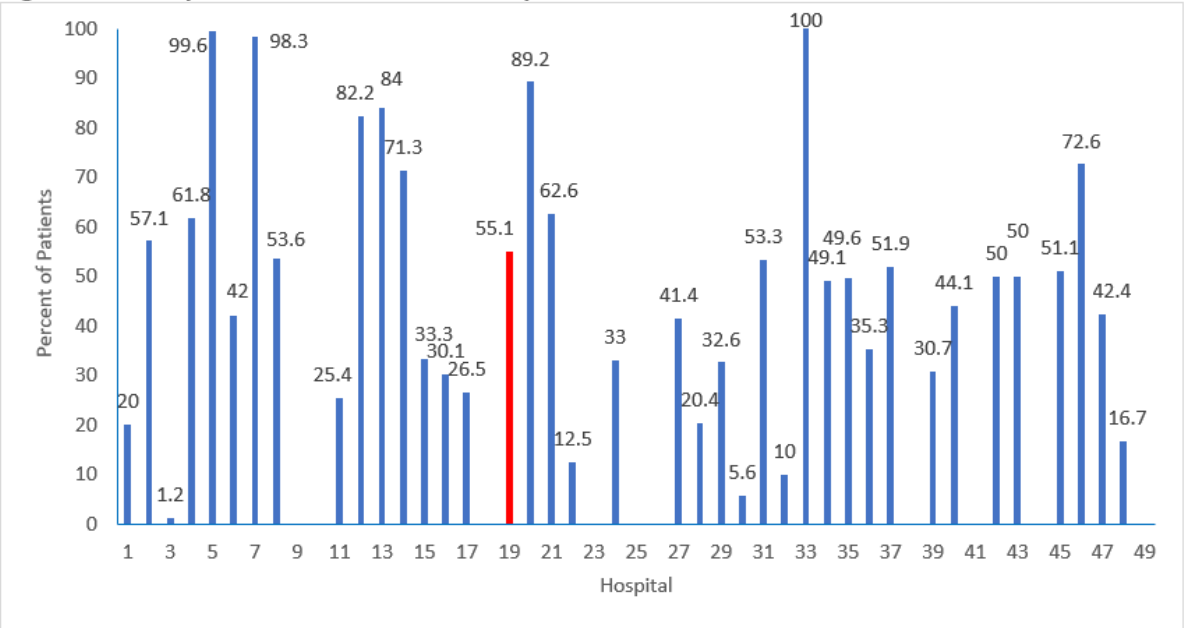

Figure 24: EMS prenotification at SEQIP hospitals 2022

Note: The bar in red represents the average EMS prenotification by SEQIP member hospitals.

KBEMS CARDIAC & STROKE SUBCOMMITTEE

- KBEMS provides oversight and recommended transport protocols
 - Local agencies can fully adopt, partially adopt, or create their own protocols that must be approved by KBEMS Medical Director
- Kentucky Board of EMS Stroke and Cardiac Subcommittee
 - Created 2013 and meets quarterly
 - Revised Recommended Stroke Transport Protocol September 2017 to include severity scale – C-STAT based on survey feedback from first responders
 - Interfacility transfer guideline post alteplase added to protocol February 2018
 - First KBEMS Annual Report 2017
 - Algorithm for Stroke Prenotification September 2018
 - Working to standardize data collection points for reporting

SUSPECTED STROKE PROTOCOL

This protocol is for patients who have an acute episode of neurological deficit without any evidence of trauma. Signs consistent with acute Stroke:

- Sudden onset of weakness or numbness in the face, arm, or leg, especially on one side of the body
- Sudden onset of trouble seeing in one or both eyes
- Sudden onset of trouble walking, dizziness, loss of balance or coordination
- Sudden onset of confusion, trouble speaking or understanding
- Sudden onset of severe headache with no known cause
- Consider other causes of altered mental status, i.e., hypoxia, hypoperfusion, hypoglycemia, trauma, or overdose

ABSOLUTE CONTRAINDICATIONS FOR FIBRINOLYTIC THERAPY

- Intracranial hemorrhage on CT
- History of intracranial hemorrhage
- Systolic BP >180mm Hg or Diastolic BP >110 mm Hg
- Serious Head Trauma or Stroke within three (3) months.
- Thrombocytopenia and Coagulopathy
- Blood Glucose <50mg/dl or >400mg/dl

Basic Standing Orders:

- Routine Patient Care
- Obtain glucose reading via glucometer.
- Administer oxygen to keep SpO2 >94%, suction as necessary, and be prepared to assist ventilation.
- Perform Cincinnati Pre-Hospital Stroke Scale.
- If positive, determine time of onset of symptoms. Time of onset of stroke is critical:
 - To patient: When was the last time you were normal?
 - To family or bystander: When was the last time you saw the patient normal?
- Obtain mobile phone contact of an informant, encourage transportation of family member.
- Maintain normal body temperature.
- Obtain 12-lead EKG during transport.
- Protect any paralyzed or partially paralyzed extremity.
- Early notification of the emergency department is critical.
- Consider Paramedic intercept / air medical transport.
- Perform a stroke severity scale for large-vessel involvement such as the CSTAT.

Advanced Standing Orders:

- Do not delay transport for ALS procedures
- Large bore IV access with 0.9% Normal Saline 100 ml per hour, unless contraindicated.
- Avoid dextrose in the absence of hypoglycemia.

Paramedic Standing Orders:

- Do not delay transport for ALS procedures
- Treat blood pressure elevation of >220/120 with 1 single dose of IV Beta Blocker or Calcium Channel Blocker (NOT NTG) if still elevated in 15 minutes contact medical control.
- Manage compromised airway.
- Continuously reassess.

Appendix: Stroke Assessment Resources

Is this a stroke?

Cincinnati Pre-Hospital Stroke Scale

This scale evaluates for facial palsy, arm weakness, and speech abnormalities. Items are scored as either normal or abnormal.

Facial Droop
The patient shows teeth or smiles.
Normal Both sides of face move equally
Abnormal One side of face does not move as well as the other.

Arm Drift
The patient closes their eyes and extends both arms straight out for 10 seconds.
Normal Both arms move the same, or both arms do not move at all.
Abnormal One arm either does not move, or one arm drifts down compared to the other.

Speech
The patient repeats "You can't teach an old dog new tricks," or some other simple, familiar saying.
Normal The patient says correct words with no slurring of words.
Abnormal The patient slurs words, says the wrong words, or is unable to speak.

<http://www.merckhealth.org/Type434441>

How severe is this stroke? C-STAT

The Cincinnati Prehospital Stroke Severity Scale's individual items and scoring.

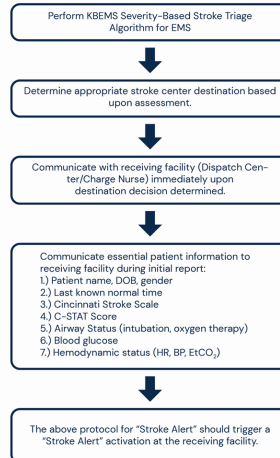

Cincinnati Prehospital Stroke Severity Scale

2 points: Conjugate gaze deviation (≥ 1 on NIHSS item for Gaze)

1 point: Incorrectly answers at least one of two levels of consciousness questions on NIHSS (age or current month) and does not follow at least one of two commands (close eyes, open and close hand) (≥ 1 on the NIHSS item for Level of Consciousness: 1b and 1c)

1 point: Caved test arm (either right, left or both) up for 10 seconds (before arm(s) falls to bed) (≥ 2 on the NIHSS item for Motor Arm)

STROKE ALERT EMS STROKE PRE-NOTIFICATION PROTOCOL

EMS – INTER-FACILITY TRANSFER PROTOCOL: Stroke Patient During or After IV t-PA

ALS Transport Required

Sending facility must be able to maintain systolic blood pressure below 180 mmHg and diastolic blood pressure below 105 mmHg prior to transport and if t-PA still infusing IV pump must go with the patient

Transferring Hospital:

Family/Caregiver or Emergency contact number:

Contact number for receiving physician:

10% of IV t-PA dose is administered via a one minute IV push, then the rest drips in over one hour. This must be followed by 50 mg normal saline - infused at the same rate to clear the t-PA from the IV tubing and ensure maximum dose infused.
No other medications through t-PA infusion line.
It is important to note the start and end time of IV t-PA

1. Perform and document Vital Signs and Neurological Exam:

(EMS Neurological Exam = Cincinnati Pre-Hospital Stroke Scale and Glasgow Coma Scale with pupil exam)

- From start of IV t-PA: every 15 minutes x 2 hours, then every 30 minutes x 6 hours, or until arrival at destination hospital

PRN for SBP >180 or DBP >105 mmHg.
□ Consider IV Labetalol 10 mg IV over 2 minutes.
□ Recheck in 5 minutes, may repeat one time.

PRN for SBP <120 mmHg.
□ HOB flat
□ Discontinue antihypertensive medications

2. Continuous cardiac monitoring

- Apply oxygen by nasal cannula or mask to maintain SpO2 >94%

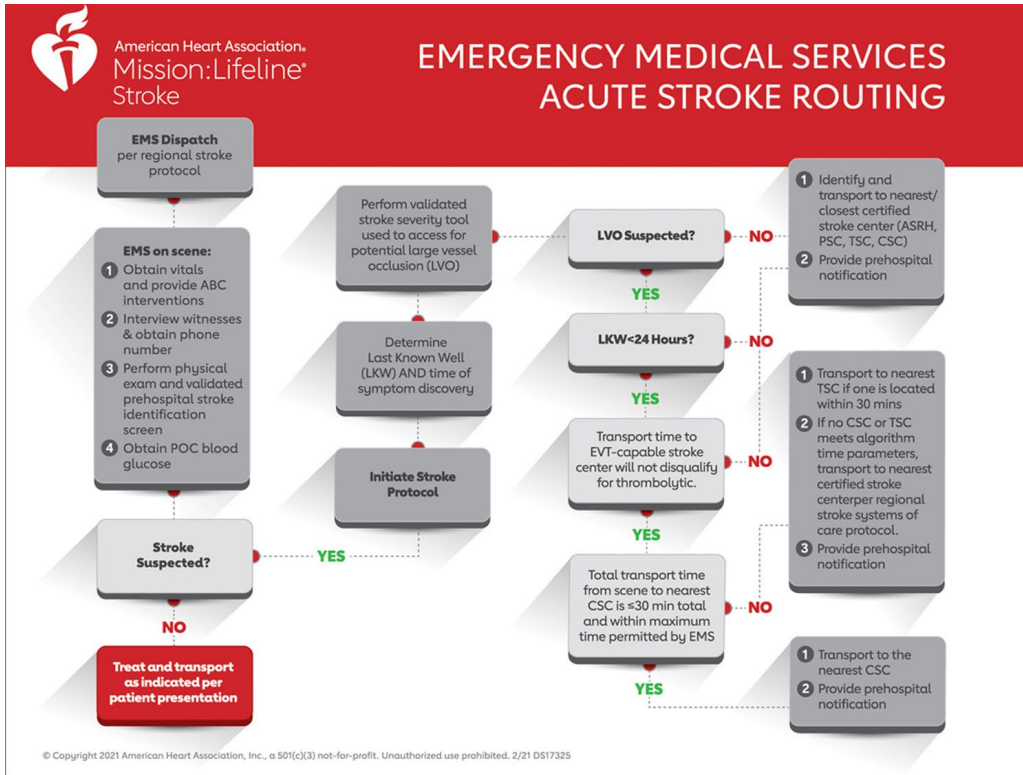

3. Continuous pulse oximetry monitoring

- Apply oxygen by nasal cannula or mask to maintain SpO2 >94%

- 4. Monitor for acute worsening conditions and decline in neurologic status (new headache or nausea, vomiting, signs of bleeding, or angioedema).
 - FIRST stop IV t-PA - then call receiving facility.

PRN for SBP <90 mmHg.
□ 1 liter Normal Saline – wide open rate
□ Notify receiving hospital

LVO DETECTION AND DESTINATION PLANS

What is your prehospital assessment detecting- Stroke or Large Vessel Occlusion?

In collaboration with the Greater Louisville hospitals, the KY Stroke Encounter Quality Improvement Project (SEQIP) wants to arm you with tools to help to identify these patients in the field and relay this information to your hospital destination.

Please join us for this webinar at 12pm or 4pm on these dates:

C-Stat Positive Patient (ELVO Stroke) Destination

After consultation with our community healthcare systems and experts in the field, we are instituting changes to the destinations we transport patients who are positive on the CSTAT scale. These changes are in recognition of the emergent nature of large vessel occlusion strokes and the specialized, time sensitive care which is required to attain the best possible outcome. Effective immediately, any patient who, after assessment, is determined to have positive finding on the CSTAT scale shall be transported to an ELVO receiving facility – Baptist Louisville, Brownsboro or UofL Hospital. Every effort should be made to ensure that patient is transported to the facility within their preferred healthcare system e.g. Baptist Health, Norton Healthcare or UL Health. Like other time sensitive diagnoses, if a patient’s clinical status is unstable and the EMS providers are unable to manage the patient, the patient may be transported to a closer facility that provides the appropriate level of care.

Measure Summary

RESOURCES POST DISCHARGE

- Community resource list;
- Preparing for follow up appointments;
- Questions to ask during follow up appointments;
- List of stroke support groups;
- Importance of having a primary care provider;
- Pseudobulbar affect educational handout;
- Caregiver stress; and
- Effects of stress

CAREGIVER STRESS

As a caregiver, it's also important to remember your own needs. Ask for help when you need it and pay attention to warning signs of caregiver stress.

SIGNS of CAREGIVER STRESS

As a caregiver, you may be so focused on your loved one that you don't realize that your own health and well-being are suffering. Watch for these signs of caregiver stress

- Constant worry
- Often tired
- Too much or too little sleep
- Weight changes
- Moody
- Lost interest in activities you enjoyed before
- Sadness
- Frequent headaches or aches and pains
- Alcohol or drug abuse, including prescriptions

TAKE CARE of YOURSELF

Remember, if you don't take care of yourself, you won't be able to care for anyone else.

1. Find time every day to do something you enjoy.
2. Stop and breathe when you need to.
3. Eat healthy by planning for meals and keeping healthy snacks on hand.
4. Avoid stress eating.
5. Stay active. Take mini activity breaks.
6. Get enough (7-8 hours) of sleep each night.
7. Get outside for at least 10 minutes every day.
8. Make time for hobbies you enjoy.
9. Ask for help from your village and/or professionals.
10. Set boundaries.
11. Say no.

STRATEGIES for CAREGIVER STRESS

Accept help. Be prepared with a list of ways that others can help you and let the helper choose what he or she would like to do.

Focus on what you are able to provide. It's normal to feel guilty sometimes but understand that no one is a "perfect" caregiver.

Set realistic goals. Break large tasks into smaller steps that you can do one at a time.

Get connected. Find out about caregiving resources in your community.

Join a support group. A support group can provide validation and encouragement.

Seek social support. Make an effort to stay well-connected with family and friends who can offer nonjudgmental emotional support.

Set personal health goals. For example, set goals to establish a good sleep routine, find time to be physically active on most days of the week, eat a healthy diet and drink plenty of water.

See your doctor. Get recommended vaccinations and screenings. Make sure to tell your doctor that you're a caregiver.

Stroke Follow-up Appointment Information

U of L Hospital
Comprehensive Stroke Center

UofLHospital.org | 502-562-8009

Items to bring:

- List of medications/supplements
- Insurance cards
- Driver's license
- Pharmacy information
- Primary care doctor information

Specialist doctor information

- Hospital discharge instructions (if needed)
- Recent test results from home or previous appointments
- List of allergies

What to tell your providers:

- How have I been feeling?
- Any new medical issues or symptoms?
- Any issues with pain?

How have I been sleeping?

- What has improved since last visit/hospitalization?

Questions to ask your providers:

- What is a stroke?
- What caused my stroke?
- What type of stroke did I have?
- What are my risk factors?
- What are the signs/symptoms of stroke?
- What are my medications for?
- What are the side effects from my medications?
- Do I have any physical limitations such as driving or working out?

What kind of exercise could I be doing?

- What are my lab results? (Bring BP/blood glucose results)
- What is the best diet for my stroke?
- Can you share my studies with me and the results?
- Can I get a copy of my test results?
- What should I expect from my recovery?
- What can I do to prevent another stroke?

GIS MAPPING GWTG-S DATA TO EVALUATE, DEVELOP, AND IMPLEMENT TARGETED STROKE MESSAGING TO THE COMMUNITY, REFERRAL FACILITIES, AND EMS

ABSTRACT PRESENTED AHA QCOR APRIL 2019

Using Geographic Information Systems (GIS) to Analyze Statewide Get With The Guidelines-Stroke (GWTGS) Data A Feasibility Project from the Kentucky Stroke Encounter Quality Improvement Project (SEQIP)

Kari Moore, Louisville, KY; Allison Merritt, Frankfort, KY; Alexander Kuhn, Columbus, OH; Amy Graham, Louisville, KY for SEQIP

Background

The Stroke Encounter Quality Improvement Project is a collaboration between certified stroke centers in Kentucky, the American Heart Association/American Stroke Association and the Kentucky Department of Public Health to implement statewide quality initiatives to improve the care of stroke patients. Since 2008, 23 hospitals participating in SEQIP have entered 56,513 ischemic stroke patient records into

Purpose

Geographic information systems (GIS) tools can expand our understanding of care and outcomes based on patient location. The purpose of this project was (1) to demonstrate the methods of linking a disease management registry with GIS mapping and analysis program, (2) to understand challenges when performing this link, and (3) to derive meaningful insight on stroke care and outcomes based by zip codes.

Methods

Registry data was derived from GWTGS and downloaded by the KDPH. The information was converted to a database file for use in ArcGIS. Geocoding was performed and after excluding those who had missing or incomplete zip codes, records were geocoded annually from 2013-October 2018. The data were then matched to one of 945 zip codes in Kentucky. Data was summarized by zip code and calendar year for:

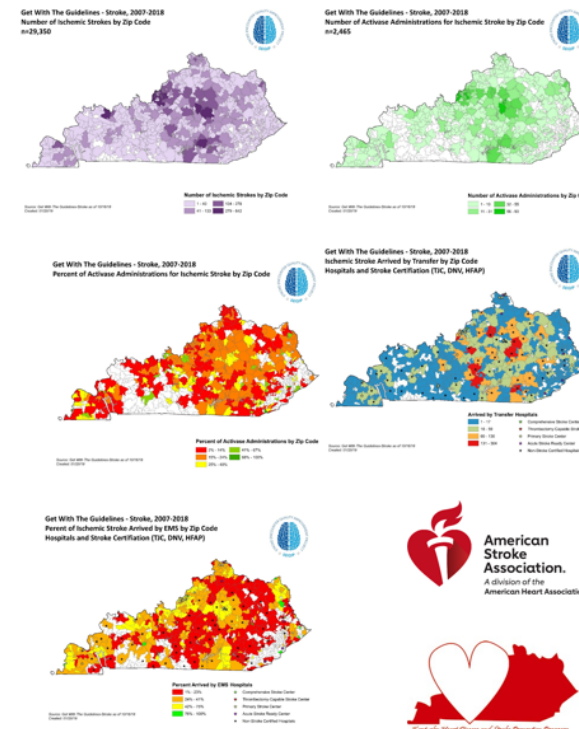

- Number ischemic strokes
- Number ischemic strokes that received IV alteplase administration
- Rate ischemic strokes receiving IV alteplase
- Number of ischemic stroke patients transferred

Results

After excluding patients with missing or incorrectly formatted zip codes, data from 29,350 GWTGS patients records were joined and

Conclusions

This feasibility project provides an example of a useful application of GIS analyses with a data registry. Using GIS mapping and methodology can assist hospital stroke coordinators and public health officials in developing and implementing interventions to improve systems of care and outcomes by targeted messaging to the community, referral facilities, and EMS. Further analysis is planned including hospital and EMS locations, socioeconomic, demographic and marketing/consumer preference data is planned to better understand variations by zip codes.

Recommendations for Regional Stroke Destination Plans in Rural, Suburban, and Urban Communities From the Prehospital Stroke System of Care Consensus Conference

A Consensus Statement From the American Academy of Neurology, American Heart Association/American Stroke Association, American Society of Neuroradiology, National Association of EMS Physicians, National Association of State EMS Officials, Society of NeuroInterventional Surgery, and Society of Vascular and Interventional Neurology: Endorsed by the Neurocritical Care Society

Kentucky Stroke Systems of Care Model

Burden of Stroke

- Review baseline data
- Establish mission, bylaws, and charter
- Identify improvement measures based on patient centered goals

Evidence Based Practice

- Identify barriers and facilitators
- Share best practices, tools, and pathways
- Develop and initiate action plans

Key Stakeholders

- Certified and non-stroke certified hospitals
- EMS agencies
- Department for Public Health
- Nursing and physician leaders
- AHA/ASA advocacy
- Team exercises to build trust

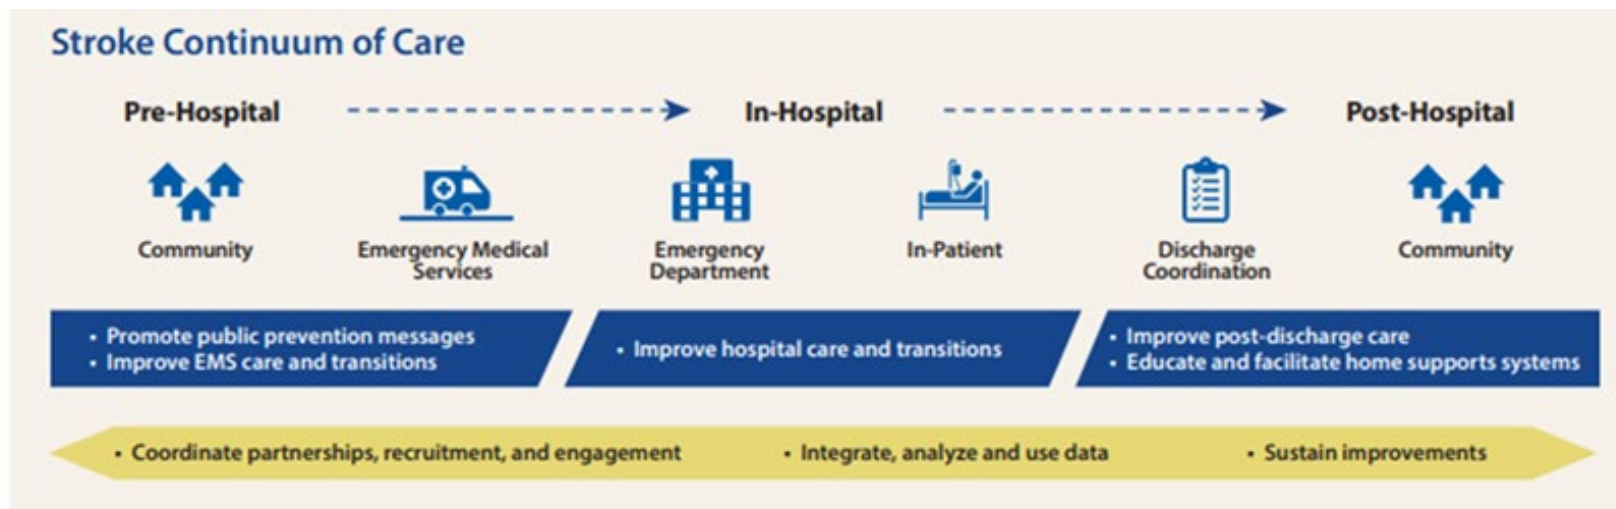

Identify gaps in performance measures

- Abstraction
- Validation
- Analysis
- Share and discuss data

PAUL COVERDELL NATIONAL ACUTE STROKE REGISTRY

PAUL
Coverdell
NATIONAL ACUTE STROKE PROGRAM

Start Date: June 30, 2021

Principal Investigators/Key Personnel:

- Dr. Larry Goldstein (UK)
- Brent McKune (UK)
- Kari Moore (UofL)
- Dr. Kerri Rempel (UofL)
- Dr. Karen Roper (UKDFCM)

Purpose:

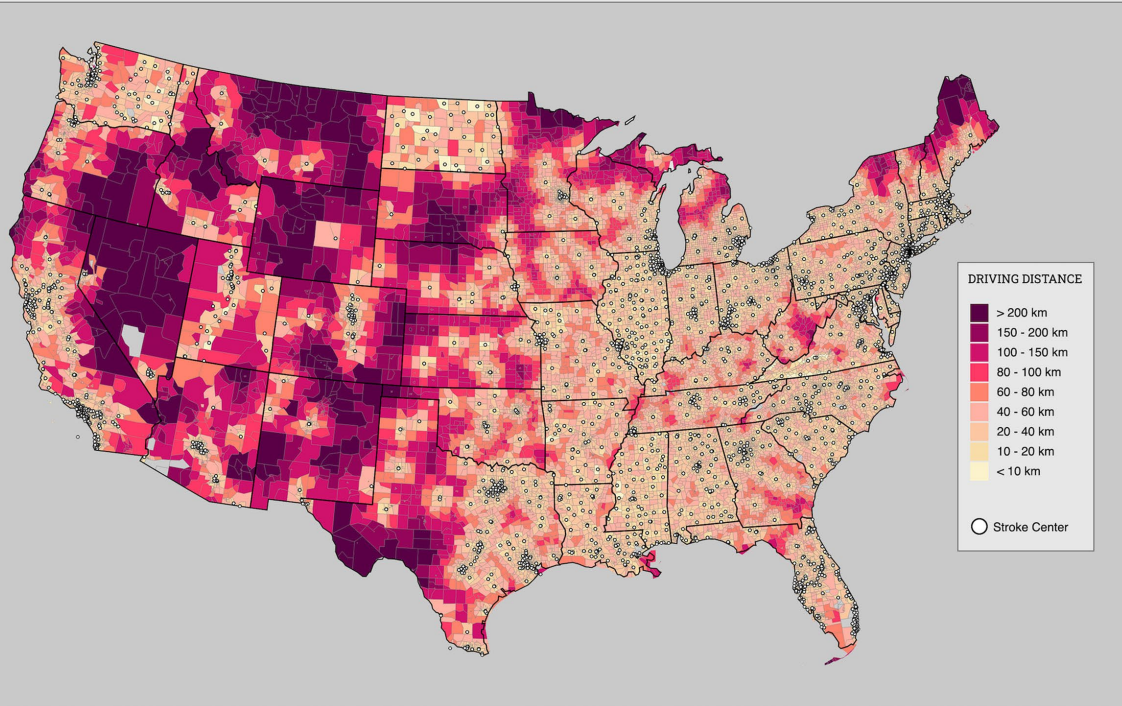

- Coordination and expansion of existing efforts in Kentucky to improve stroke-related health outcomes
- Work with Kentucky health care systems and community providers to implement comprehensive stroke systems
- Prevention in high-risk populations
- Optimize care delivery for those who have had a stroke

Strategy:

Creation of the Kentucky Stroke Improvement Cooperative (KSIC)

NEXT STEPS: 2024-2028

- Create maps by zip code health equity data to identify persons at highest risk; SDOH
- GIS mapping; map drive times to certified stroke centers
- Evaluate reperfusion therapy rates by highest risk persons
- Disseminate minority specific education materials to targeted communities
- Regionalize QI initiatives in collaboration with EMS

SUMMARY

- SEQIP created to improve cerebrovascular Stroke Systems of care
- Increased membership from 16 to 50 hospitals, 1 acute rehab hospital, 3 EMS agencies and other stakeholders
- Certified stroke centers increased from 6 to 42
- SEQIP sustained with no funding
- Significantly increased alteplase utilization and decreased DTN times c/w national data
- Ongoing performance improvement
- Ongoing collaboration with EMS, hospitals, and community partners
- Ongoing advocacy and sharing of best practices to drive policy
- Sustain funding for and collaboration with Coverdell partners
